

Practical Number	1(A)
Course Outcome	
Aim	<b>Introduction to Internet ( Overview of Internet, E-mail, www, FTP).</b>
Problem Definition	

Theory (100 words)	SMTP (Simple Mail Transfer Protocol) is a protocol used for sending emails between servers. The World Wide Web (WWW) is a collection of interlinked web pages accessible through browsers over the internet. FTP (File Transfer Protocol) enables file sharing between a client and server on a TCP/IP network. Broadband refers to high-speed internet technologies that support large data transfers, including video, voice, and multimedia content. These technologies together form the foundation of internet-based communication and information exchange in today's digital world.

Session	2024-25 (ODD)	Course Name	Web Technology Lab
Semester	3	Course Code	23CT1301
Roll No	65	Name of Student	Radhesham Gonare

Conclusion	We use it to work, to play, to connect with others, and even to argue with strangers. It's a wild, messy, and amazing thing. We built it, and now it's changing us in ways we're only starting to understand. The internet isn't just about technology; it's about the huge, connected human experience it has created.
